Satellite Communications

Robert M. Gagliardi

Satellite Communications Robert M. Gagliardi

This second edition of *Satellite Communications* is a revised, updated, and improved version of the first edition (Van Nostrand, 1984) and has been extended to include many newer topics that are rapidly becoming important in modern and next-generation satellite systems. The first half of the book again covers the basics of satellite links, but has been updated to include additional areas such as Global Positioning and deep space satellites, dual polarization, multiple beaming, advanced satellite electronics, frequency synthesizers, and digital frequency generators. The second half of the book is all new, covering frequency and beam hopping, on-board processing, EHF and optical cross links, and mobile satellites and VSAT systems. All of these latter topics figure to be important aspects of satellite systems and space platforms of the twenty-first century. As in the first edition, the objective of the new edition is to present a unified approach to satellite communications, helping the reader to become familiar with the terminology, models, analysis procedures, and evolving design directions for modern and future satellites. The presentation stresses overall system analysis and block diagram design, as opposed to complicated mathematical or physics descriptions. (Backup mathematics is relegated to the appendices where a reader can digest the detail at his own pace.) The discussion begins with the simplest satellite systems and builds to the more complex payloads presently being used.

From reader reviews:

James Lapham:

Often the book Satellite Communications will bring one to the new experience of reading the book. The author style to spell out the idea is very unique. When you try to find new book you just read, this book very suited to you. The book Satellite Communications is much recommended to you to learn. You can also get the e-book from your official web site, so you can quickly to read the book.

Rachel Robertson:

Reading can called thoughts hangout, why? Because while you are reading a book particularly book entitled Satellite Communications your head will drift away trough every dimension, wandering in every aspect that maybe unknown for but surely can be your mind friends. Imaging every single word written in a publication then become one contact form conclusion and explanation this maybe you never get just before. The Satellite Communications giving you another experience more than blown away your head but also giving you useful information for your better life with this era. So now let us show you the relaxing pattern the following is your body and mind is going to be pleased when you are finished studying it, like winning a sport. Do you want to try this extraordinary spending spare time activity?

Anthony Wood:

Many people spending their time frame by playing outside together with friends, fun activity together with family or just watching TV all day long. You can have new activity to invest your whole day by looking at a book. Ugh, you think reading a book can actually hard because you have to bring the book everywhere? It okay you can have the e-book, delivering everywhere you want in your Cell phone. Like Satellite Communications which is getting the e-book version. So , try out this book? Let's see.

Ronald Jackson:

What is your hobby? Have you heard this question when you got students? We believe that that question was given by teacher to the students. Many kinds of hobby, Everyone has different hobby. And also you know that little person including reading or as looking at become their hobby. You have to know that reading is very important and book as to be the point. Book is important thing to provide you knowledge, except your own teacher or lecturer. You get good news or update regarding something by book. Many kinds of books that can you choose to use be your object. One of them is this Satellite Communications.
