Orchestration Graphs: Modeling Scalable Education Pierre Dillenbourg

By modeling pedagogical scenarios as directed geometrical graphs and proposing an associated modeling language, this book describes how rich learning activities, often designed for small classes, can be scaled up for use with thousands of participants. With the vertices of these graphs representing learning activities and the edges capturing the pedagogical relationship between activities, individual, team, and class-wide activities are integrated into a consistent whole. The workflow mechanisms modeled in the graphs enable the construction of scenarios that are richer than those currently implemented in MOOCs. The cognitive states of learners in two consecutive activities feed a transition matrix, which encapsulates the probability of succeeding in the second activity, based on success in the former. This transition matrix is summarized by a numerical value, which is used as the weight of the edge. This pedagogical framework is connected to stochastic models, with the goal of making learning analytics more appealing for data scientists. However, the proposed modeling language is not only useful in learning technologies, it also allows researchers in learning sciences to formally describe the structure of any lesson, from an elementary school lesson with 20 students to an online course with 20,000 participants.

From reader reviews:

Denise Rutledge:

Typically the book Orchestration Graphs: Modeling Scalable Education will bring one to the new experience of reading some sort of book. The author style to explain the idea is very unique. In the event you try to find new book to study, this book very ideal to you. The book Orchestration Graphs: Modeling Scalable Education is much recommended to you to study. You can also get the e-book from your official web site, so you can quickly to read the book.

Diane Sanchez:

Spent a free time to be fun activity to accomplish! A lot of people spent their sparetime with their family, or their particular friends. Usually they accomplishing activity like watching television, likely to beach, or picnic inside the park. They actually doing same every week. Do you feel it? Do you wish to something different to fill your personal free time/ holiday? May be reading a book is usually option to fill your free time/ holiday. The first thing that you ask may be what kinds of book that you should read. If you want to try look for book, may be the book untitled Orchestration Graphs: Modeling Scalable Education can be great book to read. May be it might be best activity to you.

Irving Dorn:

People live in this new morning of lifestyle always aim to and must have the spare time or they will get lot of stress from both everyday life and work. So , whenever we ask do people have extra time, we will say absolutely without a doubt. People is human not really a huge robot. Then we ask again, what kind of activity do you have when the spare time coming to anyone of course your answer can unlimited right. Then do you ever try this one, reading textbooks. It can be your alternative in spending your spare time, the particular book you have read will be Orchestration Graphs: Modeling Scalable Education.

Irene Navarro:

The book untitled Orchestration Graphs: Modeling Scalable Education contain a lot of information on the item. The writer explains her idea with easy way. The language is very clear and understandable all the people, so do not worry, you can easy to read the idea. The book was published by famous author. The author brings you in the new period of time of literary works. You can actually read this book because you can please read on your smart phone, or product, so you can read the book with anywhere and anytime. In a situation you wish to purchase the e-book, you can open their official web-site along with order it. Have a nice read.
