Thomas Duriez, Steven Brunton, Bernd R. Noack

Machine Learning Control - Taming Nonlinear Dynamics and Turbulence (Fluid Mechanics and Its Applications) Thomas Duriez, Steven Brunton, Bernd R. Noack

This is the first textbook on a generally applicable control strategy for turbulence and other complex nonlinear systems. The approach of the book employs powerful methods of machine learning for optimal nonlinear control laws. This machine learning control (MLC) is motivated and detailed in Chapters 1 and 2. In Chapter 3, methods of linear control theory are reviewed. In Chapter 4, MLC is shown to reproduce known optimal control laws for linear dynamics (LQR, LQG). In Chapter 5, MLC detects and exploits a strongly nonlinear actuation mechanism of a low-dimensional dynamical system when linear control methods are shown to fail. Experimental control demonstrations from a laminar shear-layer to turbulent boundary-layers are reviewed in Chapter 6, followed by general good practices for experiments in Chapter 7. The book concludes with an outlook on the vast future applications of MLC in Chapter 8. Matlab codes are provided for easy reproducibility of the presented results. The book includes interviews with leading researchers in turbulence control (S. Bagheri, B. Batten, M. Glauser, D. Williams) and machine learning (M. Schoenauer) for a broader perspective. All chapters have exercises and supplemental videos will be available through YouTube.

From reader reviews:

Jennifer Frederick:

Have you spare time for the day? What do you do when you have much more or little spare time? Yeah, you can choose the suitable activity intended for spend your time. Any person spent their own spare time to take a stroll, shopping, or went to often the Mall. How about open or maybe read a book entitled Machine Learning Control - Taming Nonlinear Dynamics and Turbulence (Fluid Mechanics and Its Applications)? Maybe it is to become best activity for you. You know beside you can spend your time along with your favorite's book, you can more intelligent than before. Do you agree with it is opinion or you have additional opinion?

Steven Deloatch:

What do you in relation to book? It is not important along? Or just adding material if you want something to explain what yours problem? How about your spare time? Or are you busy man or woman? If you don't have spare time to perform others business, it is make one feel bored faster. And you have spare time? What did you do? All people has many questions above. They must answer that question mainly because just their can do that. It said that about reserve. Book is familiar in each person. Yes, it is right. Because start from on pre-school until university need this particular Machine Learning Control - Taming Nonlinear Dynamics and Turbulence (Fluid Mechanics and Its Applications) to read.

Gwendolyn Smith:

In this 21st millennium, people become competitive in most way. By being competitive right now, people have do something to make these individuals survives, being in the middle of often the crowded place and notice by simply surrounding. One thing that sometimes many people have underestimated the item for a while is reading. Yeah, by reading a publication your ability to survive enhance then having chance to stand than other is high. For you who want to start reading the book, we give you that Machine Learning Control - Taming Nonlinear Dynamics and Turbulence (Fluid Mechanics and Its Applications) book as starter and daily reading reserve. Why, because this book is usually more than just a book.

Heidi Garcia:

People live in this new moment of lifestyle always make an effort to and must have the extra time or they will get large amount of stress from both daily life and work. So , once we ask do people have extra time, we will say absolutely yes. People is human not a robot. Then we consult again, what kind of activity do you have when the spare time coming to you actually of course your answer can unlimited right. Then ever try this one, reading publications. It can be your alternative inside spending your spare time, the book you have read will be Machine Learning Control - Taming Nonlinear Dynamics and Turbulence (Fluid Mechanics and Its Applications).
