Building Wireless Sensor Networks Using Arduino (Community Experience Distilled)

Matthijs Kooijman

Building Wireless Sensor Networks Using Arduino (Community Experience Distilled) Matthijs Kooijman

Leverage the powerful Arduino and XBee platforms to monitor and control your surroundings

About This Book

- Build your own low-power, wireless network using ready-made Arduino and XBee hardware
- Create a complex project using the Arduino prototyping platform
- A guide that explains the concepts and builds upon them with the help of examples to form projects

Who This Book Is For

This book is targeted at embedded system developers and hobbyists who have some working knowledge of Arduino and who wish to extend their projects using wireless connectivity.

What You Will Learn

- Interact with XBee boards using the XCTU program on Windows, OS X, or Linux
- Make your Arduino boards communicate wirelessly, using XBee modules in the advanced API mode
- Centrally collect and store measured sensor data, in the cloud or your own database
- Connect the coordinator Arduino to the Internet and send data to web services
- Control your environment automatically, based on sensor input from your network
- Interact with off-the-shelf ZigBee Home Automation devices
- Make your devices battery-powered and let them sleep to get months or even years of battery life

In Detail

Arduino has been established as the de facto standard microcontroller programming platform, being used for one-off do-it-yourself projects as well as prototypes for actual products. By providing a myriad of libraries, the Arduino community has made it very easy to interact with pretty much any piece of hardware out there. XBee offers a great range of low-power wireless solutions that are easy to work with, by taking all of the complexity of wireless (mesh) networking out of your hands and letting you focus on what to send without worrying about the how. Building wireless sensor networks is cost-effective as well as efficient as it will be done with Arduino support.

The book starts with a brief introduction to various wireless protocols, concepts, and the XBee hardware that enables their use. Then the book expands to explain the Arduino boards to you, letting them read and send sensor data, collect that data centrally, and then even control your home from the Internet. Moving further more advanced topics such as interacting through the standard Zigbee Home Automation protocol, or making your application power-efficient are covered. By the end of the book, you will have all the tools needed to build complete, real-world solutions.

Style and approach

A hands-on guide, featuring a single home automation project that can be built as described or with endless variations. Every step is illustrated with complete examples and screenshots, allowing you to build the examples swiftly.

From reader reviews:

Judy Turner:

Why don't make it to become your habit? Right now, try to prepare your time to do the important work, like looking for your favorite publication and reading a guide. Beside you can solve your trouble; you can add your knowledge by the publication entitled Building Wireless Sensor Networks Using Arduino (Community Experience Distilled). Try to make the book Building Wireless Sensor Networks Using Arduino (Community Experience Distilled) as your friend. It means that it can to get your friend when you truly feel alone and beside those of course make you smarter than before. Yeah, it is very fortunated for you. The book makes you considerably more confidence because you can know every thing by the book. So , we should make new experience and knowledge with this book.

Cruz Fleury:

Have you spare time for any day? What do you do when you have a lot more or little spare time? Yep, you can choose the suitable activity with regard to spend your time. Any person spent all their spare time to take a walk, shopping, or went to typically the Mall. How about open as well as read a book entitled Building Wireless Sensor Networks Using Arduino (Community Experience Distilled)? Maybe it is to become best activity for you. You know beside you can spend your time together with your favorite's book, you can better than before. Do you agree with it is opinion or you have additional opinion?

Pamela Bost:

Information is provisions for people to get better life, information presently can get by anyone on everywhere. The information can be a knowledge or any news even a problem. What people must be consider while those information which is in the former life are hard to be find than now's taking seriously which one would work to believe or which one the particular resource are convinced. If you find the unstable resource then you buy it as your main information it will have huge disadvantage for you. All of those possibilities will not happen in you if you take Building Wireless Sensor Networks Using Arduino (Community Experience Distilled) as your daily resource information.

Raymond Jackson:

Many people spending their time by playing outside along with friends, fun activity along with family or just watching TV the whole day. You can have new activity to enjoy your whole day by looking at a book. Ugh, do you consider reading a book really can hard because you have to take the book everywhere? It ok you can have the e-book, taking everywhere you want in your Touch screen phone. Like Building Wireless Sensor Networks Using Arduino (Community Experience Distilled) which is finding the e-book version. So , why not try out this book? Let's see.
