Design, Analysis, and Interpretation of Genome-Wide Association Scans (Statistics for Biology and Health)

Daniel Stram

Design, Analysis, and Interpretation of Genome-Wide Association Scans (Statistics for Biology and Health) Daniel Stram

This book presents the statistical aspects of designing, analyzing and interpreting the results of genome-wide association scans (GWAS studies) for genetic causes of disease using unrelated subjects. Particular detail is given to the practical aspects of employing the bioinformatics and data handling methods necessary to prepare data for statistical analysis. The goal in writing this book is to give statisticians, epidemiologists, and students in these fields the tools to design a powerful genome-wide study based on current technology. The other part of this is showing readers how to conduct analysis of the created study.

Design and Analysis of Genome-Wide Association Studies provides a compendium of well-established statistical methods based upon single SNP associations. It also provides an introduction to more advanced statistical methods and issues. Knowing that technology, for instance large scale SNP arrays, is quickly changing, this text has significant lessons for future use with sequencing data. Emphasis on statistical concepts that apply to the problem of finding disease associations irrespective of the technology ensures its future applications. The author includes current bioinformatics tools while outlining the tools that will be required for use with extensive databases from future large scale sequencing projects. The author includes current bioinformatics tools while outlining additional issues and needs arising from the extensive databases from future large scale sequencing projects.

From reader reviews:

Lula Barnes:

As people who live in often the modest era should be revise about what going on or details even knowledge to make these keep up with the era which can be always change and progress. Some of you maybe can update themselves by reading books. It is a good choice for yourself but the problems coming to you actually is you don't know what one you should start with. This Design, Analysis, and Interpretation of Genome-Wide Association Scans (Statistics for Biology and Health) is our recommendation to cause you to keep up with the world. Why, since this book serves what you want and need in this era.

Bertha Morrison:

Information is provisions for anyone to get better life, information these days can get by anyone with everywhere. The information can be a information or any news even a concern. What people must be consider while those information which is from the former life are hard to be find than now is taking seriously which one is suitable to believe or which one often the resource are convinced. If you find the unstable resource then you understand it as your main information you will see huge disadvantage for you. All of those possibilities will not happen with you if you take Design, Analysis, and Interpretation of Genome-Wide Association Scans (Statistics for Biology and Health) as your daily resource information.

Jessica Henriquez:

You are able to spend your free time you just read this book this e-book. This Design, Analysis, and Interpretation of Genome-Wide Association Scans (Statistics for Biology and Health) is simple to deliver you can read it in the recreation area, in the beach, train along with soon. If you did not have much space to bring the actual printed book, you can buy the actual e-book. It is make you much easier to read it. You can save often the book in your smart phone. So there are a lot of benefits that you will get when you buy this book.

Ruth Little:

You will get this Design, Analysis, and Interpretation of Genome-Wide Association Scans (Statistics for Biology and Health) by browse the bookstore or Mall. Only viewing or reviewing it might to be your solve challenge if you get difficulties to your knowledge. Kinds of this reserve are various. Not only by means of written or printed but in addition can you enjoy this book through e-book. In the modern era such as now, you just looking by your mobile phone and searching what your problem. Right now, choose your own personal ways to get more information about your guide. It is most important to arrange you to ultimately make your knowledge are still up-date. Let's try to choose appropriate ways for you.
