Speech Spectrum Analysis (Signals and Communication Technology)

Sean Fulop

Speech Spectrum Analysis (Signals and Communication Technology) Sean Fulop

The accurate determination of the speech spectrum, particularly for short frames, is commonly pursued in diverse areas including speech processing, recognition, and acoustic phonetics.

With this book the author makes the subject of spectrum analysis understandable to a wide audience, including those with a solid background in general signal processing and those without such background.

In keeping with these goals, this is not a book that replaces or attempts to cover the material found in a general signal processing textbook.

Some essential signal processing concepts are presented in the first chapter, but even there the concepts are presented in a generally understandable fashion as far as is possible.

Throughout the book, the focus is on applications to speech analysis; mathematical theory is provided for completeness, but these developments are set off in boxes for the benefit of those readers with sufficient background.

Other readers may proceed through the main text, where the key results and applications will be presented in general heuristic terms, and illustrated with software routines and practical "show-and-tell" discussions of the results.

At some points, the book refers to and uses the implementations in the Praat speech analysis software package, which has the advantages that it is used by many scientists around the world, and it is free and open source software. At other points, special software routines have been developed and made available to complement the book, and these are provided in the Matlab programming language.

If the reader has the basic Matlab package, he/she will be able to immediately implement the programs in that platform---no extra "toolboxes" are required.

From reader reviews:

Donna Jennings:

In this 21st hundred years, people become competitive in each way. By being competitive right now, people have do something to make these people survives, being in the middle of often the crowded place and notice simply by surrounding. One thing that oftentimes many people have underestimated the item for a while is reading. Yes, by reading a guide your ability to survive increase then having chance to stand than other is high. To suit your needs who want to start reading a book, we give you this specific Speech Spectrum Analysis (Signals and Communication Technology) book as beginning and daily reading guide. Why, because this book is greater than just a book.

Jenna Springer:

Reading can called head hangout, why? Because if you find yourself reading a book specially book entitled Speech Spectrum Analysis (Signals and Communication Technology) your thoughts will drift away trough every dimension, wandering in each aspect that maybe unidentified for but surely will end up your mind friends. Imaging just about every word written in a publication then become one form conclusion and explanation this maybe you never get before. The Speech Spectrum Analysis (Signals and Communication Technology) giving you yet another experience more than blown away your head but also giving you useful info for your better life in this particular era. So now let us show you the relaxing pattern is your body and mind are going to be pleased when you are finished studying it, like winning an activity. Do you want to try this extraordinary paying spare time activity?

Annamarie Hernandez:

Don't be worry in case you are afraid that this book will filled the space in your house, you could have it in e-book approach, more simple and reachable. That Speech Spectrum Analysis (Signals and Communication Technology) can give you a lot of buddies because by you looking at this one book you have issue that they don't and make an individual more like an interesting person. This particular book can be one of one step for you to get success. This e-book offer you information that might be your friend doesn't realize, by knowing more than additional make you to be great folks. So , why hesitate? Let me have Speech Spectrum Analysis (Signals and Communication Technology).

Travis Smith:

As a pupil exactly feel bored to be able to reading. If their teacher expected them to go to the library or to make summary for some guide, they are complained. Just small students that has reading's heart and soul or real their pastime. They just do what the instructor want, like asked to go to the library. They go to at this time there but nothing reading very seriously. Any students feel that reading is not important, boring along with can't see colorful photos on there. Yeah, it is to become complicated. Book is very important for you. As we know that on this period, many ways to get whatever we wish. Likewise word says, ways to reach

Chinese's country. Therefore this Speech Spectrum Analysis (Signals and Communication Technology) can make you experience more interested to read.
