From Neuron to Cognition via Computational Neuroscience (Computational Neuroscience Series)
Michael A. Arbib, James J. Bonaiuto
This textbook presents a wide range of subjects in neuroscience from a computational perspective. It offers a comprehensive, integrated introduction to core topics, using computational tools to trace a path from neurons and circuits to behavior and cognition. Moreover, the chapters show how computational neuroscience -- methods for modeling the causal interactions underlying neural systems -- complements empirical research in advancing the understanding of brain and behavior. The chapters -- all by leaders in the field, and carefully integrated by the editors -- cover such subjects as action and motor control; neuroplasticity, neuromodulation, and reinforcement learning; vision; and language -- the core of human cognition.The book can be used for advanced undergraduate or graduate level courses. It presents all necessary background in neuroscience beyond basic facts about neurons and synapses and general ideas about the structure and function of the human brain. Students should be familiar with differential equations and probability theory, and be able to pick up the basics of programming in MATLAB and/or Python. Slides, exercises, and other ancillary materials are freely available online, and many of the models described in the chapters are documented in the brain operation database, BODB (which is also described in a book chapter).**Contributors**Michael A. Arbib, Joseph Ayers, James Bednar, Andrej Bicanski, James J. Bonaiuto, Nicolas Brunel, Jean-Marie Cabelguen, Carmen Canavier, Angelo Cangelosi, Richard P. Cooper, Carlos R. From reader reviews:

Frank Jorge:

Playing with family in a very park, coming to see the ocean world or hanging out with pals is thing that usually you may have done when you have spare time, then why you don't try matter that really opposite from that. One activity that make you not feeling tired but still relaxing, trilling like on roller coaster you have been ride on and with addition details. Even you love From Neuron to Cognition via Computational Neuroscience (Computational Neuroscience Series), it is possible to enjoy both. It is great combination right, you still desire to miss it? What kind of hang type is it? Oh seriously its mind hangout folks. What? Still don't obtain it, oh come on its named reading friends.

Janet Kline:

Don't be worry if you are afraid that this book can filled the space in your house, you may have it in e-book means, more simple and reachable. This kind of From Neuron to Cognition via Computational Neuroscience (Computational Neuroscience Series) can give you a lot of friends because by you investigating this one book you have issue that they don't and make you more like an interesting person. This specific book can be one of one step for you to get success. This reserve offer you information that might be your friend doesn't know, by knowing more than different make you to be great persons. So , why hesitate? We need to have From Neuron to Cognition via Computational Neuroscience (Computational Neuroscience Series).

Terry Hollis:

You can find this From Neuron to Cognition via Computational Neuroscience (Computational Neuroscience Series) by browse the bookstore or Mall. Merely viewing or reviewing it could possibly to be your solve trouble if you get difficulties for ones knowledge. Kinds of this reserve are various. Not only through written or printed but additionally can you enjoy this book simply by e-book. In the modern era just like now, you just looking of your mobile phone and searching what their problem. Right now, choose your personal ways to get more information about your reserve. It is most important to arrange yourself to make your knowledge are still up-date. Let's try to choose proper ways for you.

Wanda Jacobsen:

E-book is one of source of information. We can add our expertise from it. Not only for students and also native or citizen have to have book to know the update information of year to help year. As we know those guides have many advantages. Beside we add our knowledge, also can bring us to around the world. Through the book From Neuron to Cognition via Computational Neuroscience (Computational Neuroscience Series) we can have more advantage. Don't you to definitely be creative people? Being creative person must want to read a book. Just simply choose the best book that appropriate with your aim. Don't always be doubt to change your life with that book From Neuron to Cognition via Computational Neuroscience (Computational Neuroscience Series). You can more appealing than now.
