Computational Methods in Biometric Authentication: Statistical Methods for Performance Evaluation (Information Science and Statistics) Michael E. Schuckers

Biometrics, the science of using physical traits to identify individuals, is playing an increasing role in our security-conscious society and across the globe. Biometric authentication, or bioauthentication, systems are being used to secure everything from amusement parks to bank accounts to military installations. Yet developments in this field have not been matched by an equivalent improvement in the statistical methods for evaluating these systems.

Compensating for this need, this unique text/reference provides a basic statistical methodology for practitioners and testers of bioauthentication devices, supplying a set of rigorous statistical methods for evaluating biometric authentication systems. This framework of methods can be extended and generalized for a wide range of applications and tests.

This is the first single resource on statistical methods for estimation and comparison of the performance of biometric authentication systems. The book focuses on six common performance metrics: for each metric, statistical methods are derived for a single system that incorporates confidence intervals, hypothesis tests, sample size calculations, power calculations and prediction intervals. These methods are also extended to allow for the statistical comparison and evaluation of multiple systems for both independent and paired data.

Topics and features:

- * Provides a statistical methodology for the most common biometric performance metrics: failure to enroll (FTE), failure to acquire (FTA), false non-match rate (FNMR), false match rate (FMR), and receiver operating characteristic (ROC) curves
- * Presents methods for the comparison of two or more biometric performance metrics
- * Introduces a new bootstrap methodology for FMR and ROC curve estimation
- * Supplies more than 120 examples, using publicly available biometric data where possible
- * Discusses the addition of prediction intervals to the bioauthentication statistical toolset
- * Describes sample-size and power calculations for FTE, FTA, FNMR and FMR

Researchers, managers and decisions makers needing to compare biometric systems across a variety of metrics will find within this reference an invaluable set of statistical tools. Written for an upper-level undergraduate or master's level audience with a quantitative background, readers are also expected to have an understanding of the topics in a typical undergraduate statistics course.

Dr. Michael E. Schuckers is Associate Professor of Statistics at St. Lawrence University, Canton, NY, and a member of the Center for Identification Technology Research.

From reader reviews:

Sylvia Dasilva:

In other case, little people like to read book Computational Methods in Biometric Authentication: Statistical Methods for Performance Evaluation (Information Science and Statistics). You can choose the best book if you want reading a book. So long as we know about how is important some sort of book Computational Methods in Biometric Authentication: Statistical Methods for Performance Evaluation (Information Science and Statistics). You can add know-how and of course you can around the world with a book. Absolutely right, since from book you can know everything! From your country until eventually foreign or abroad you may be known. About simple factor until wonderful thing you are able to know that. In this era, we can easily open a book as well as searching by internet product. It is called e-book. You can use it when you feel fed up to go to the library. Let's learn.

Katherine Humphrey:

Book is to be different for every grade. Book for children until finally adult are different content. As you may know that book is very important normally. The book Computational Methods in Biometric Authentication: Statistical Methods for Performance Evaluation (Information Science and Statistics) was making you to know about other know-how and of course you can take more information. It is quite advantages for you. The publication Computational Methods in Biometric Authentication: Statistical Methods for Performance Evaluation (Information Science and Statistics) is not only giving you more new information but also to get your friend when you experience bored. You can spend your personal spend time to read your book. Try to make relationship while using book Computational Methods in Biometric Authentication: Statistical Methods for Performance Evaluation (Information Science and Statistics). You never really feel lose out for everything in case you read some books.

Alma Rasmussen:

The feeling that you get from Computational Methods in Biometric Authentication: Statistical Methods for Performance Evaluation (Information Science and Statistics) is a more deep you looking the information that hide inside the words the more you get enthusiastic about reading it. It doesn't mean that this book is hard to be aware of but Computational Methods in Biometric Authentication: Statistical Methods for Performance Evaluation (Information Science and Statistics) giving you joy feeling of reading. The article writer conveys their point in specific way that can be understood simply by anyone who read the idea because the author of this publication is well-known enough. That book also makes your vocabulary increase well. So it is easy to understand then can go along, both in printed or e-book style are available. We suggest you for having that Computational Methods in Biometric Authentication: Statistical Methods for Performance Evaluation (Information Science and Statistics) instantly.

Maxine Ford:

Reading a book can be one of a lot of pastime that everyone in the world enjoys. Do you like reading book and so. There are a lot of reasons why people enjoyed. First reading a publication will give you a lot of new facts. When you read a publication you will get new information because book is one of many ways to share the information or perhaps their idea. Second, reading a book will make a person more imaginative. When you studying a book especially fiction book the author will bring someone to imagine the story how the personas do it anything. Third, it is possible to share your knowledge to some others. When you read this Computational Methods in Biometric Authentication: Statistical Methods for Performance Evaluation (Information Science and Statistics), it is possible to tells your family, friends and soon about yours publication. Your knowledge can inspire the mediocre, make them reading a e-book.
