Automated Transit: Planning, Operation, and Applications (IEEE Press Series on Systems Science and Engineering) Rongfang Liu

A comprehensive discussion of automated transit

This book analyzes the successful implementations of automated transit in various international locations, such as Paris, Toronto, London, and Kuala Lumpur, and investigates the apparent lack of automated transit applications in the urban environment in the United States.

The book begins with a brief definition of automated transit and its historical development. After a thorough description of the technical specifications, the author highlights a few applications from each sub-group of the automated transit spectrum. International case studies display various technologies and their applications, and identify vital factors that affect each system and performance evaluations of existing applications. The book then discusses the planning and operation of automated transit applications at both macro and micro levels. Finally, the book covers a number of less successful concepts, as well as the lessons learned, allowing readers to gain a comprehensive understanding of the topic.

Key features:

- Provides a thorough examination of automated transit applications, their impact and implications for society
- Written by the committee chair for the Automated Transit Systems Transportation, Research Board
- Offers essential information on planning, costs, and applications of automated transit systems
- Covers driverless metros, automated LRT, group and personal rapid transit, a review of worldwide applications
- Includes capacity and safety guidelines, as well as vehicles, propulsion, and communication and control systems

This book is essential reading for engineers, researchers, scientists, college or graduate students who work in transportation planning, engineering, operation and management fields.

From reader reviews:

Philip Kirkpatrick:

Information is provisions for those to get better life, information presently can get by anyone with everywhere. The information can be a know-how or any news even an issue. What people must be consider while those information which is within the former life are hard to be find than now could be taking seriously which one is suitable to believe or which one the actual resource are convinced. If you find the unstable resource then you buy it as your main information you will have huge disadvantage for you. All those possibilities will not happen with you if you take Automated Transit: Planning, Operation, and Applications (IEEE Press Series on Systems Science and Engineering) as your daily resource information.

Eddie Patten:

A lot of people always spent all their free time to vacation or maybe go to the outside with them household or their friend. Do you realize? Many a lot of people spent that they free time just watching TV, or maybe playing video games all day long. If you wish to try to find a new activity honestly, that is look different you can read a new book. It is really fun in your case. If you enjoy the book that you simply read you can spent 24 hours a day to reading a e-book. The book Automated Transit: Planning, Operation, and Applications (IEEE Press Series on Systems Science and Engineering) it is quite good to read. There are a lot of people that recommended this book. We were holding enjoying reading this book. In case you did not have enough space to create this book you can buy typically the e-book. You can m0ore simply to read this book from your smart phone. The price is not too expensive but this book provides high quality.

Lois Hutter:

Do you one of the book lovers? If yes, do you ever feeling doubt when you find yourself in the book store? Make an effort to pick one book that you just dont know the inside because don't determine book by its deal with may doesn't work is difficult job because you are afraid that the inside maybe not as fantastic as in the outside appearance likes. Maybe you answer is usually Automated Transit: Planning, Operation, and Applications (IEEE Press Series on Systems Science and Engineering) why because the excellent cover that make you consider concerning the content will not disappoint anyone. The inside or content will be fantastic as the outside or even cover. Your reading 6th sense will directly make suggestions to pick up this book.

Virginia Shrader:

In this period of time globalization it is important to someone to get information. The information will make anyone to understand the condition of the world. The health of the world makes the information simpler to share. You can find a lot of referrals to get information example: internet, classifieds, book, and soon. You will observe that now, a lot of publisher which print many kinds of book. The book that recommended to your account is Automated Transit: Planning, Operation, and Applications (IEEE Press Series on Systems Science and Engineering) this guide consist a lot of the information on the condition of this world now. This

specific book was represented how can the world has grown up. The terminology styles that writer use to explain it is easy to understand. The actual writer made some research when he makes this book. That's why this book suitable all of you.
