## **Fractal and Diffusion Entropy Analysis of Time Series: Theory, concepts, applications and computer codes for studying fractal noises and Lévy walk signals** Nicola Scafetta

Scale invariance has been found to empirically hold for a number of complex systems. The correct evaluation of the scaling exponents of a time series is fundamental to assess the real physical nature of a phenomenon. The traditional methods used to determine these scaling exponents are equivalent because they all rely on the numerical evaluation of the variance. However, two statistical classes of phenomena exist: fractal Brownian motions and Lévy flights and walks. In this book I present the theory and concepts of alternative fractal methods of time series analysis. I introduce a complementary method based on the Shannon entropy: the Diffusion Entropy Analysis (DEA). Using synthetic, solar, geophysical, sociological, physiological and biological data, I examine the properties of these methodologies and discuss the physical ambiguities of the variance-based methods. I argue that the variance-based algorithms should be used together with DEA to properly distinguish fractal Brownian motions from Lévy flight-walk classes of noises and complex processes. Computer C++ codes are provided for generating complex fractal noises and performing multiple fractal analyses of time series.

### **From reader reviews:**

#### **Martha Wilson:**

Now a day people who Living in the era exactly where everything reachable by talk with the internet and the resources within it can be true or not call for people to be aware of each info they get. How many people to be smart in getting any information nowadays? Of course the correct answer is reading a book. Examining a book can help individuals out of this uncertainty Information specifically this Fractal and Diffusion Entropy Analysis of Time Series: Theory, concepts, applications and computer codes for studying fractal noises and Lévy walk signals book since this book offers you rich facts and knowledge. Of course the information in this book hundred percent guarantees there is no doubt in it everbody knows.

#### **Donald Cortes:**

The book Fractal and Diffusion Entropy Analysis of Time Series: Theory, concepts, applications and computer codes for studying fractal noises and Lévy walk signals will bring that you the new experience of reading any book. The author style to spell out the idea is very unique. Should you try to find new book to see, this book very appropriate to you. The book Fractal and Diffusion Entropy Analysis of Time Series: Theory, concepts, applications and computer codes for studying fractal noises and Lévy walk signals is much recommended to you you just read. You can also get the e-book from the official web site, so you can quickly to read the book.

#### **Justin Tran:**

Reading a book to get new life style in this yr; every people loves to examine a book. When you study a book you can get a large amount of benefit. When you read books, you can improve your knowledge, simply because book has a lot of information onto it. The information that you will get depend on what types of book that you have read. In order to get information about your examine, you can read education books, but if you act like you want to entertain yourself read a fiction books, such us novel, comics, along with soon. The Fractal and Diffusion Entropy Analysis of Time Series: Theory, concepts, applications and computer codes for studying fractal noises and Lévy walk signals will give you a new experience in reading through a book.

#### **David Yoon:**

What is your hobby? Have you heard which question when you got learners? We believe that that issue was given by teacher for their students. Many kinds of hobby, Every person has different hobby. And you know that little person such as reading or as looking at become their hobby. You should know that reading is very important and also book as to be the point. Book is important thing to incorporate you knowledge, except your own personal teacher or lecturer. You discover good news or update concerning something by book. Many kinds of books that can you decide to try be your object. One of them is niagra Fractal and Diffusion
