Higher Intelligence: How to Create a Functional Artificial Brain Peter Aj Van Der Made

Higher Intelligence details a decade-long quest to research the human brain with the aim to develop an artificial brain chip. Computers are great tools for number crunching, statistical analysis or surfing the internet but their usefulness is limited when it comes to Artificial Intelligence. For nearly 70 years, computer scientists have tried to develop programs that approach the intellect of a human, but to no avail. Humanoid intelligent robots are still fiction. Even the most sophisticated robots are nothing but programmed dolls. - - - - - Can machines act with intelligence, think and show initiative? What is the definition of intelligence? How can we build a learning, intelligent machine? Once we have built such an intelligent machine, what will its impact on society be? Why has learning, a prime function of the brain, until now never been part of the Artificial Intelligence process? - - - - - Higher Intelligence explores all these questions and gives insights in the function of the human brain. It sheds light on a new digital technology, an artificial brain chip that has the capability to learn and evolve.
