Structured-Population Models in Marine, Terrestrial, and Freshwater Systems (Population and Community Biology Series)

Structured-Population Models in Marine, Terrestrial, and Freshwater Systems (Population and Community Biology Series)

In the summer of 1993, twenty-six graduate and postdoctoral students and fourteen lecturers converged on Cornell University for a summer school devoted to structured-population models. This school was one of a series to address concepts cutting across the traditional boundaries separating terrestrial, marine, and freshwater ecology. Earlier schools resulted in the books *Patch Dynamics* (S. A. Levin, T. M. Powell & J. H. Steele, eds., Springer-Verlag, Berlin, 1993) and *Ecological Time Series* (T. M. Powell & J. H. Steele, eds., Chapman and Hall, New York, 1995); a book on food webs is in preparation. Models of population structure (differences among individuals due to age, size, developmental stage, spatial location, or genotype) have an important place in studies of all three kinds of ecosystem. In choosing the participants and lecturers for the school, we selected for diversity-biologists who knew some mathematics and mathematicians who knew some biology, field biologists sobered by encounters with messy data and theoreticians intoxicated by the elegance of the underlying mathematics, people concerned with long-term evolutionary problems and people concerned with the acute crises of conservation biology. For four weeks, these perspectives swirled in discussions that started in the lecture hall and carried on into the sweltering Ithaca night. Diversity may not increase stability, but it surely makes things interesting.

From reader reviews:

James Lightle:

Book is actually written, printed, or highlighted for everything. You can realize everything you want by a e-book. Book has a different type. We all know that that book is important point to bring us around the world. Close to that you can your reading talent was fluently. A publication Structured-Population Models in Marine, Terrestrial, and Freshwater Systems (Population and Community Biology Series) will make you to always be smarter. You can feel a lot more confidence if you can know about every thing. But some of you think which open or reading a new book make you bored. It isn't make you fun. Why they might be thought like that? Have you trying to find best book or acceptable book with you?

Carmen Flood:

A lot of people always spent their free time to vacation or maybe go to the outside with them household or their friend. Did you know? Many a lot of people spent they will free time just watching TV, or even playing video games all day long. In order to try to find a new activity here is look different you can read a new book. It is really fun to suit your needs. If you enjoy the book you read you can spent the whole day to reading a reserve. The book Structured-Population Models in Marine, Terrestrial, and Freshwater Systems (Population and Community Biology Series) it is quite good to read. There are a lot of people who recommended this book. These were enjoying reading this book. When you did not have enough space to bring this book you can buy typically the e-book. You can m0ore simply to read this book through your smart phone. The price is not too costly but this book has high quality.

Billy Anderson:

Beside that Structured-Population Models in Marine, Terrestrial, and Freshwater Systems (Population and Community Biology Series) in your phone, it could give you a way to get more close to the new knowledge or data. The information and the knowledge you might got here is fresh from your oven so don't be worry if you feel like an outdated people live in narrow small town. It is good thing to have Structured-Population Models in Marine, Terrestrial, and Freshwater Systems (Population and Community Biology Series) because this book offers for you readable information. Do you sometimes have book but you do not get what it's all about. Oh come on, that will not end up to happen if you have this in the hand. The Enjoyable arrangement here cannot be questionable, including treasuring beautiful island. So do you still want to miss the item? Find this book and read it from right now!

Patricia Welling:

As we know that book is very important thing to add our expertise for everything. By a reserve we can know everything we would like. A book is a set of written, printed, illustrated as well as blank sheet. Every year seemed to be exactly added. This guide Structured-Population Models in Marine, Terrestrial, and Freshwater Systems (Population and Community Biology Series) was filled with regards to science. Spend your time to

add your knowledge about your science competence. Some people has distinct feel when they reading a new book. If you know how big benefit from a book, you can sense enjoy to read a reserve. In the modern era like now, many ways to get book that you wanted.
